

RECRUITMENT EXPERTS IN THE  
CONSTRUCTION/CONSTRUCTION  
MATERIALS FIELD

## ANTAL SECTOR SHOT

### CONSTRUCTION FIELD ON THE RISE

The construction sector continued to develop in 2023 despite the current economic context. Several trends have stood out in the first 4-5 months of this year, which show us the adaptability of investors. Given the decrease in real estate transactions and delays in projects already started, companies are moving towards public works, attracted by European funding programs and the growing demand in this area.

The engineering and construction industries are always changing to meet the demands of society. From new technologies to redesigned materials, these industries are constantly innovating. In 2023, these trends will continue as architects, engineers and construction professionals work together to transform materials into efficient and sustainable options for their projects.

As we move towards a greener future, sustainable architectural materials are becoming increasingly important. Building Information Modelling (BIM) is set to revolutionize the engineering and construction industry. With its ability to enable users to create, visualize and analyse construction projects in a 3D environment, BIM is quickly becoming an indispensable tool for architects, engineers and contractors.

As a result, Antal recruitment team was on high demand to hire construction materials especially HVAC Sales managers, Structural design engineers, renewable energy site architects and construction & expansion project managers.

**We source hard-to-find talent, for your hard-to-fill roles.**

**Our Candidates are usually exclusive to Antal and are not the kind to apply to web site vacancies all around.**

With over 20 years of expertise in Romania and SEE, I am one of 18 recruiters and consultants in our experienced team.
